

Function

```
<form>
  <input type="button" onclick="sayHello()" value="Say Hello" />
</form>

<script>
  function sayHello(a){
    alert(a.value)
  }
</script>
```

And it alerts “undefined”. What’s the problem?

The problem: in `onclick="sayHello()"` pass not parameter while `sayHello` need to be passed a parameter.

Fix it:

```
<form>
  <input type="button" onclick="sayHello(this)" value="Say Hello" />
</form>

<script>
  function sayHello(a) {
    alert(a.value)
  }
</script>
```
